## DIVISION of POLYNOMIALS

Recap: When we divide monomials, we keep the base then subtract the exponents.

| Ex1.Simplify: | Ex2. Simplify: |
| :--- | :--- |
| $\frac{25 x^{8}}{-5 x^{3}}$ | $\frac{-32 x^{3} y^{4} z^{5}}{-64 x^{2} y z^{3}}$ |
|  |  |

Lesson: When we divide a polynomial by a monomial, we divide each term by the monomial.

| Ex1. Simplify: | Ex2. Simplify: <br> $\frac{12 x^{2}-36 x}{3 x}$ |
| :--- | :--- |
|  |  |
|  |  |

Simplify the following algebraic expressions:

| i) $\left(-\mathbf{7} \boldsymbol{x}^{3}+\mathbf{6} \boldsymbol{x}^{2}\right) \div\left(-\boldsymbol{x}^{2}\right)$ | ii) $\left(\mathbf{5} \boldsymbol{b}^{2}-\mathbf{1 0 b} \mathbf{- 2 0}\right) \div(\mathbf{- 5})$ |
| :--- | :--- |
|  |  |
| iii) <br> $5 a b+20 a c-20 a d$ <br> $5 a$ | $\frac{14 x^{2} y^{3} z-28 x^{3} y^{2} z^{2}+35 x y z}{7 x y z}$ |

## APPLICATIONS of POLYNOMIALS

1. In an isosceles triangle, two of the sides have length $x^{2}+3 x-8$. The perimeter of the triangle is $4 x^{2}+8 x+5$. Find a polynomial to represent the length of the third side.
2. For the shape on the right, find:
a) The polynomials to represent the missing sides. Label the diagram: $5 x+2$
b) The perimeter of the whole shape
c) The area of the whole shape

3. A rectangular backyard has a length of $3 x^{2}-2 x+4$ metres and a width of $4 x$ metres. The owner has put down stones to create a square sitting area measuring $3 x$ metres on all sides.
a) Calculate the area of the yard that is still grass (has not been covered by stones).
b) Calculate the grass area if $x=2$
